Hiring Team / Recruitment Manager

Orange Cyberdefense

Sweden

Application: SOC Engineer – Managed Security Services

Dear Hiring Team,

I am writing to express my strong enthusiasm for the SOC Engineer position at Orange Cyberdefense. Having recently completed my degree in Fullstack Development alongside accumulating six years of hands-on leadership experience in the physical security sector, I offer a distinctive hybrid background that combines software development insights with a practical, incident-ready security mindset. I am eager to apply this unique perspective to support your clients within the Microsoft Defender XDR ecosystem.

During my fullstack development internship at Sprinta, I worked closely with modern cloud architectures in Azure, building containerized microservices (.NET, C#, Angular, TypeScript) and data pipelines. This engineering foundation gives me a strong technical baseline for a SOC role: I understand underlying application structures, REST APIs, and system log behavior, allowing me to approach security events with a well-rounded technical perspective.

Parallel to my developer background, I have spent the past six years serving as a Security Guard and Assistant Team Lead with Addici Security. Operating complex security panels, managing digital access control systems, and leading emergency incident responses under high pressure have trained me to think critically about risk mitigation, policy compliance, and threat containment.

Key Alignment & Targeted Upskilling:

- **Completed Microsoft Security Courses:** Completed online courses covering both **SC-200** (Microsoft Security Operations Analyst) and **SC-900** (Microsoft Security Fundamentals), focusing on Microsoft Defender XDR and Intune. I am eager to formalize these with official certifications through Orange Cyberdefense.
- **KQL Fundamentals:** Learned the basics of **KQL (Kusto Query Language)** syntax to query logs and inspect alerts in Defender/Sentinel environments.
- **Active Practice on Hack The Box:** Currently actively practicing on **Hack The Box** to gain hands-on familiarity with defensive security concepts, log inspection, and threat investigation.
- **Communication & Client Focus:** As an Assistant Team Lead, I have developed clear, calm communication skills in Swedish and English, ensuring technical concepts are clearly explained to clients and colleagues.

Orange Cyberdefense's collaborative culture, focus on mentorship, and leadership in managed Microsoft security services make it the ideal environment for me to build my career in cybersecurity. I am available for interviews and look forward to discussing how my software development background, security experience, and active upskilling will bring value to your SOC team.

Sincerely,

Jerry Lundahl
